Lowest DSCR
2.31
in 2027-28 · read against 1.25

Break-even
70.2%
of sales in 2027-28

Meera Foods, a partnership firm, proposes a unit at Example village, Nashik, to roast, season and pack chana and peanuts for shops and wholesalers in the district.

The project costs ₹29.48 lakh. The partners bring ₹11.48 lakh (38.95%) and ask a term loan of ₹18.00 lakh at 10% a year, repaid in 60 monthly instalments of ₹38,245 once sales start, 5 months after the loan is first drawn. A working-capital limit of ₹3.78 lakh is asked alongside.

On the basis set out in the notes, the cash the unit earns for the loan covers each year's payment at least 2.31 times, in 2027-28, and 2.90 times on average over the loan.

GOES IN
Raw chana and groundnut, salt and spices, packing material, power

WHAT THE UNIT DOES
Cleans, roasts, seasons, cools and packs, on one roasting line

COMES OUT IN 2027-28
Roasted chana: 21,600 kg
Roasted peanuts: 14,400 kg

WHAT IT EARNS IN 2027-28
Sales ₹79.20 lakh
Profit after tax ₹5.19 lakh

EXHIBIT 1

Sales reach ₹105.60 lakh by the third year, and the loan is covered more than twice over in every year

Amounts in ₹ lakh; DSCR in times

	2027-28	2028-29	2029-30	2030-31	2031-32
Sales	79.20	92.40	105.60	105.60	105.60
Profit before interest, depreciation and tax	13.34	16.97	20.56	19.90	19.21
Profit after tax	5.19	8.25	11.25	11.31	11.34
Cash available for the loan	10.61	12.85	15.08	14.39	13.69
Payment due on the loan	4.59	4.59	4.59	4.59	4.59
DSCR	**2.31**	**2.80**	**3.29**	**3.14**	**2.98**

Source: Statements 1 and 2. The basis of every line is in the notes.

HOW THIS REPORT IS PREPARED

This report is prepared by the partners of Meera Foods to support their application for the loan.

Every figure is worked out by FinSight's engine from the facts the partners gave. The words are the partners' own, drafted with FinSight's help and read and confirmed by them.

The figures for 2027-28 onwards are projections on the basis in the notes. They are an honest estimate, not a promise. The report gives no opinion on the loan: the lender decides.

HOW TO READ IT

Each exhibit says its finding in its title. A reader short of time can read the titles alone, front to back.

The small numbers point to the notes. Each line of a statement names the note that gives its basis, as in a company's annual accounts.

The statements sit at the back, in full, in rupees. The exhibits in front are drawn from them, in ₹ lakh.

2 · THE BUSINESS AND ITS PROMOTERS

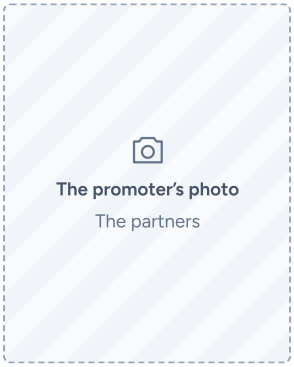

Two partners from the snack trade, making and selling their own roasted snacks from Nashik

Name
Meera Foods

Constitution
Partnership firm or LLP

Activity
Roasted snacks

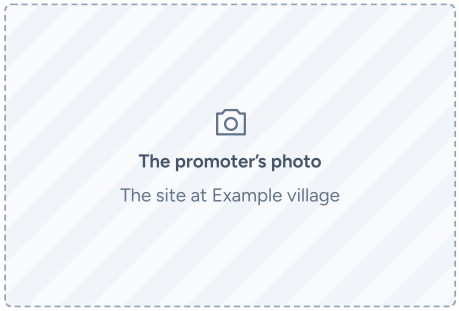

Address
Example village, Nashik

Who they are. Meera Foods is a partnership firm set up to make roasted snacks. Its partners have worked in the snack trade in Nashik district: one buying pulses and groundnut at the market yards, the other selling packed snacks to shops. They will run the unit themselves. One looks after buying and the roasting floor; the other after orders, delivery and collection.

Where the unit stands. The unit is at Example village, close to the Nashik market yards where chana and groundnut are traded, and to the towns where the snacks will sell. The building is a single shed with a roasting hall, a packing room and a store.

Why it starts this size. The firm opens with two products that share one roasting line and sells within the district. It plans to run at 60% of its capacity in the first year and 80% by the third (note 2), so the loan does not rest on a full house from the first month.

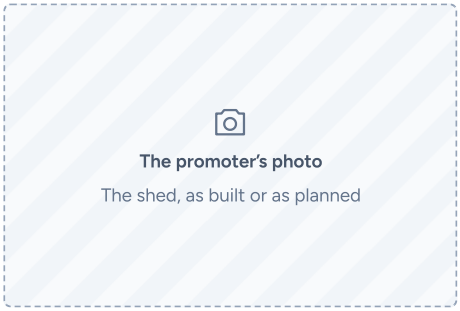

EXHIBIT 2

From the first draw of the loan to the first sale takes 5 months

NOVEMBER 2026	5 MONTHS	2027-28	60 INSTALMENTS
Term loan first drawn	Building, machines, trial runs. Interest in these months, ₹75,000, is paid by the partners.	First sales	₹38,245 a month, principal and interest

Source: the terms of the loan asked. Note 9.

3 · PRODUCTS, PROCESS AND MARKET

Two products from one roasting line, sold to shops within the district

EXHIBIT 3

Raw chana and groundnut become packed snacks in six steps on one line

1 **Raw material in**
Chana and groundnut from the market yards, weighed and stored

2 **Cleaning and grading**
Stones, dust and broken grain taken out

3 **Roasting**
In the roaster, batch by batch

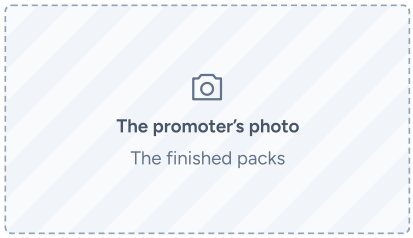

4 **Seasoning**
Salt and spices added while warm

5 **Cooling**
On trays, so the packs stay crisp

6 **Packing and dispatch**
Weighed, sealed, boxed and sent out

The steps are as the partners described them. Machines are as in the suppliers' quotations (attached).

EXHIBIT 4

At full running the line makes two products at one price

Sales in 2027-28 in ₹ lakh

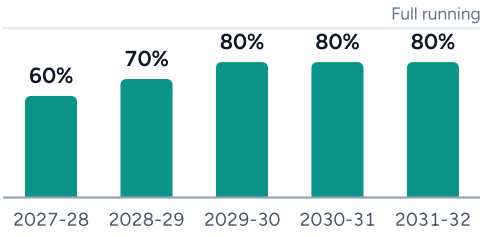

Product	At full running	Price	Sold in 2027-28	Sales
Roasted chana	3,000 kg a month	₹220 a kg	21,600 kg	47.52
Roasted peanuts	2,000 kg a month	₹220 a kg	14,400 kg	31.68
Total				**79.20**

Source: Statement 1. Notes 1 and 2.

EXHIBIT 5

The unit fills to 80% of its capacity by the third year

Use of the capacity

Note 2.

Who buys. Roasted chana and peanuts are everyday snacks, sold loose and in small packs by grocery shops, tea stalls and sweet shops. The firm will sell under its own name to shops and wholesalers in Nashik district, delivering with its own vehicle.

Why they will buy. Buyers are many and small, and no one buyer is expected to take a large share. The firm competes on freshness and steady supply. Shops that stock the packs are expected to order again each week.

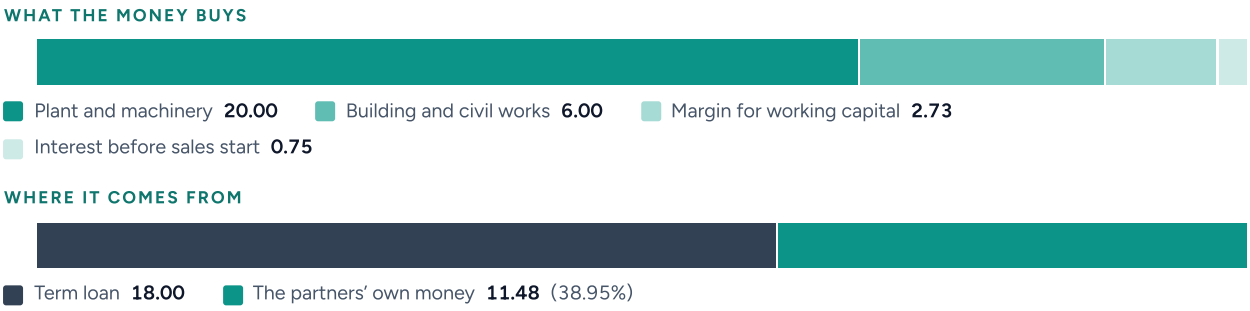

4 · COST OF THE PROJECT AND HOW IT IS PAID FOR

The partners bring 38.95% of a ₹29.48 lakh project; a term loan of ₹18.00 lakh pays for the rest

EXHIBIT 6

Two-thirds of the money buys plant and machinery; the loan is smaller than the machines it pays for

Each bar is the whole cost of the project. Amounts in ₹ lakh.

Source: the tables below. Notes 8 and 9.

COST OF THE PROJECT, IN RUPEES

Building and civil works	6,00,000
Plant and machinery	20,00,000
Interest on the term loan before sales start	75,000
Margin for working capital	2,73,403
Total cost of the project	**29,48,403**

MEANS OF FINANCE, IN RUPEES

Promoters' contribution (38.95%)	11,48,403
Term loan	18,00,000
Total means of finance	**29,48,403**

LOANS ASKED

Term loan	₹18,00,000 at 10% a year
Repayment	60 monthly instalments of ₹38,245, after 5 months
Working-capital limit	₹3,77,556 at 10% a year

The machines. Plant and machinery is the largest head, at the prices in the suppliers' quotations, which are attached. The building is a shed with a roasting hall, a packing room and a store.

Before sales start. Interest on the term loan in the months before the first sale, ₹75,000, is paid by the partners and counted in the cost (note 9). The margin for working capital, ₹2.73 lakh, is part of the cost of the project (note 8).

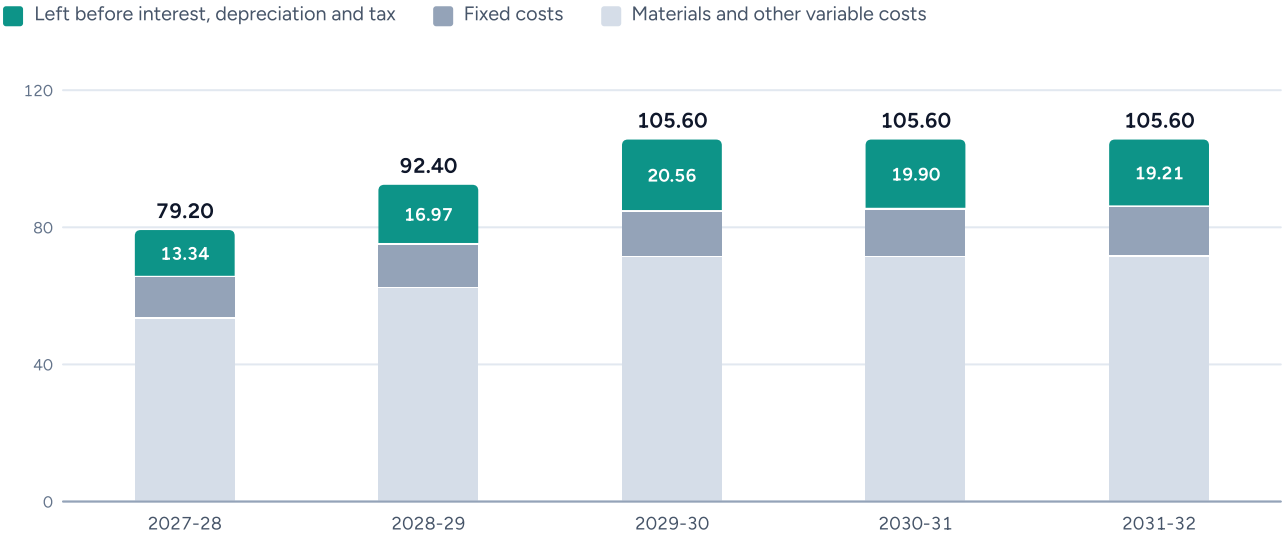

5 · SALES, COSTS AND PROFIT

Sales rise from ₹79.20 lakh to ₹105.60 lakh as the unit fills its capacity, and profit after tax reaches ₹11.25 lakh

EXHIBIT 7

Of every year's sales, what is left after running costs is enough to carry the loan

Each column is the year's sales, in ₹ lakh, split into what they cost and what is left

Source: Statement 1. Notes 1 to 4.

₹ lakh	2027-28	2028-29	2029-30	2030-31	2031-32
Sales	79.20	92.40	105.60	105.60	105.60
Materials and other variable costs	53.86	62.83	71.81	71.81	71.81
Fixed costs	12.00	12.60	13.23	13.89	14.59
Profit before interest, depreciation and tax	13.34	16.97	20.56	19.90	19.21
Profit after tax	**5.19**	**8.25**	**11.25**	**11.31**	**11.34**
Net profit margin	6.6%	8.9%	10.7%	10.7%	10.7%

What drives sales. Sales follow the capacity in use (note 2), at prices held level over the five years (note 1). No growth in price is counted on.

What drives profit. Variable costs stay at 68% of sales (note 3). Fixed costs grow each year (note 4) while sales hold from the third year, so profit before interest, depreciation and tax eases from ₹20.56 lakh to ₹19.21 lakh. The projection does not hide this.

6 · CAN THE UNIT REPAY THE LOAN?

The cash the unit earns covers every year's payment at least 2.31 times

Average DSCR

2.90

read against 1.50

Lowest DSCR

2.31

in 2027-28 · read against 1.25

Payment due each year

₹4.59 lakh

₹38,245 a month

Interest cover

4.69

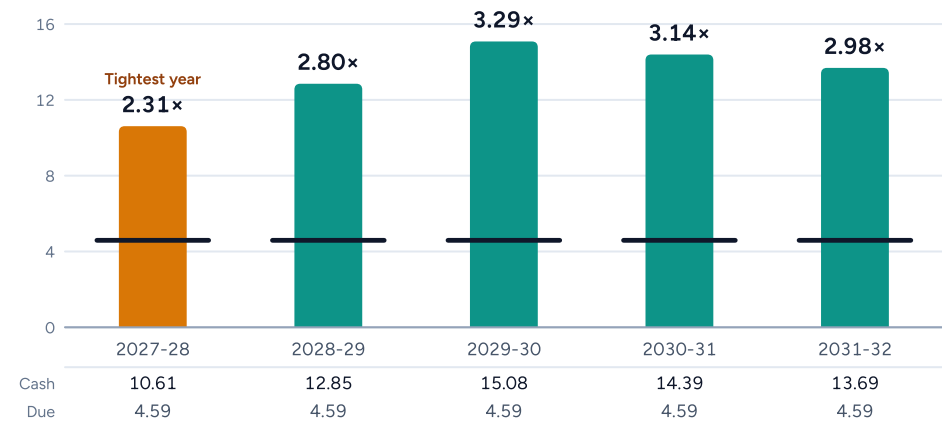

in 2027-28

The levels are FinSight's default benchmarks (note 10). A lender may read against its own.

EXHIBIT 8

The tightest year is the first, 2027-28, and even then the cash is 2.31 times the payment

Columns: cash available for the loan. Line: the payment due. ₹ lakh; DSCR in times above each column.

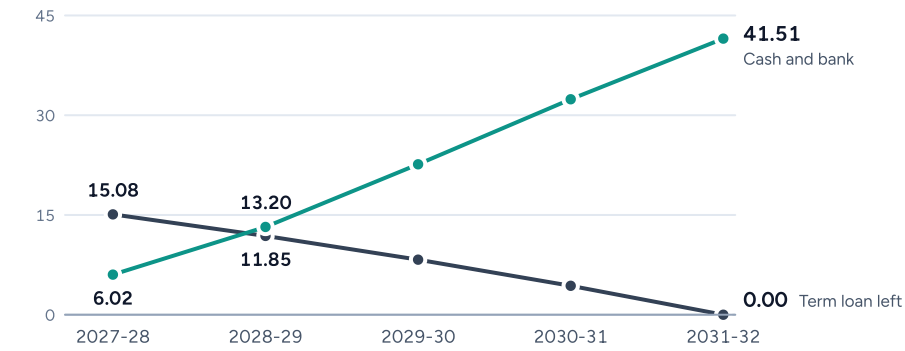

Source: Statement 2.

EXHIBIT 9

By the end of 2028-29 the cash in hand is more than the loan left; the loan is cleared in 2031-32

At each year end, ₹ lakh

Source: Statement 3.

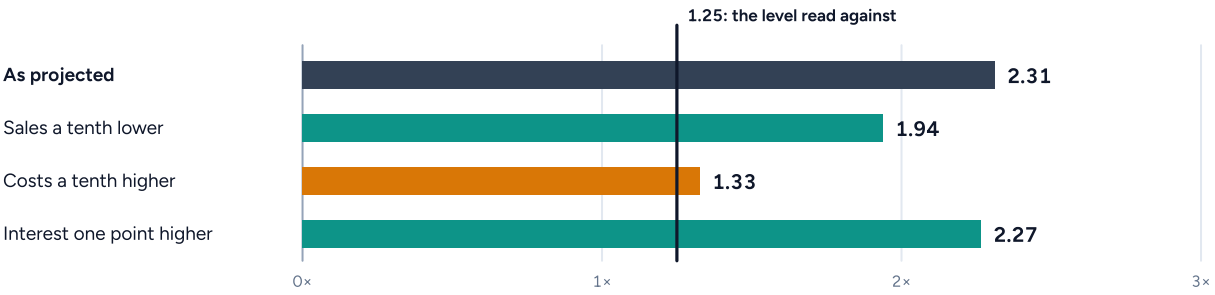

7 · IF THINGS GO WORSE THAN PLANNED

With costs a tenth higher, the lowest year's cover is 1.33: thinner, and still above the level of 1.25

EXHIBIT 10

In each case tried, the lowest year still clears the level

DSCR in the lowest year. Each case is the whole projection worked again with one input changed.

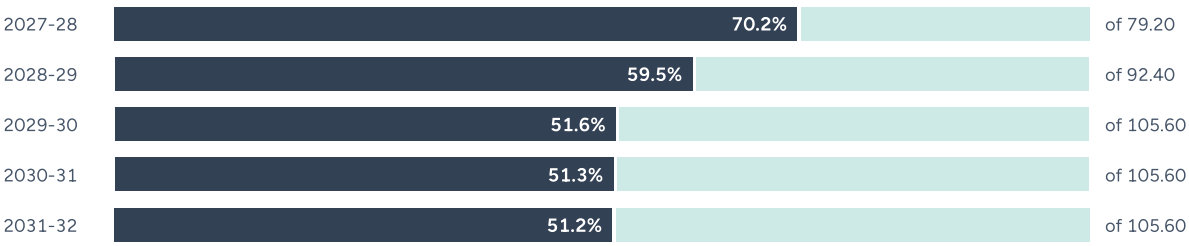

The case	Average DSCR	Lowest DSCR	Profit after tax, 2027-28	Lowest cash and bank
As projected	**2.90**	**2.31 in 2027-28**	**5.19**	**6.02**
Sales a tenth lower	2.44	1.94 in 2027-28	3.48	4.30
Costs a tenth higher	1.71	1.33 in 2027-28	0.67	1.50
Interest one point higher	2.84	2.27 in 2027-28	5.04	5.95

Amounts in ₹ lakh. "Costs a tenth higher" raises both the variable and the fixed costs by a tenth.

EXHIBIT 11

The unit covers all its costs at 70.2% of first-year sales, and at about half of sales from the third year

Dark: the share of the year's sales needed to cover every cost. Light: sales beyond that. Sales in ₹ lakh.

Source: Statement 2. Costs here include depreciation and interest.

What hurts most. Of the three cases, higher costs bite hardest: the average cover falls to 1.71 and the lowest to 1.33. Section 8 says what the partners will do about raw-material prices.

What hurts least. A rate one point higher moves the lowest cover only to 2.27. The unit's cash is far more sensitive to its own costs and sales than to the price of the loan.

8 · RISKS AND WHAT THE PARTNERS WILL DO

The two risks that matter most are raw-material prices and the first years' sales; each has a stated answer

	The risk	What it would do	What the partners will do
1	**Raw chana and groundnut prices swing with the season**	The margin thins. Costs a tenth higher take the lowest cover to 1.33 (Exhibit 10).	Buy at the market yards in season and hold stock within the working-capital limit. Revise pack prices when the market moves.
2	**Sales build more slowly than planned**	Sales a tenth lower take the lowest cover to 1.94 (Exhibit 10).	Start with the shops the partners already supply. Add towns one at a time. The plan counts on only part of the capacity in the first two years (note 2).
3	**A power cut or a roaster breakdown stops the line**	Lost days of production in a month.	A service agreement with the machine's supplier, common spares kept at the unit, and stock of finished packs for a few days' orders.
4	**Shops pay late**	Cash is tied up beyond the days planned (note 8).	Collect on delivery rounds each week. Stop supply to a shop that falls behind.
5	**Food-safety rules**	A lapse can stop sales.	Keep the food-safety registration current, keep batch records, and train the workers in clean handling.
6	**The unit depends on its two partners**	Work suffers if one is away.	Each partner knows both buying and selling. A senior worker is trained to run the roasting floor.

The figures in the middle column are the engine's what-if cases. The words are the partners'. The report does not rank the risks or score them: the lender forms its own view.

The full report also carries the sales by product, the break-even working and the repayment schedule, instalment by instalment.

NOTES · THE BASIS OF THE FIGURES

Ten notes carry every assumption behind the projections

1 **Sales**

Roasted chana: 3,000 kg a month at full running, at ₹220 a kg. Roasted peanuts: 2,000 kg a month at full running, at ₹220 a kg. The prices: growing 0% a year.

2 **Use of the capacity**

60%, 70%, 80% by year from the first sales, and held there.

3 **Materials and other variable costs**

68% of sales, the same share every year.

4 **Fixed costs**

In a full first year: ₹12,00,000, growing 5% a year.

5 **Depreciation and write-off**

Depreciation is on the written-down value. Preliminary expenses are written off in five equal parts.

6 **Interest**

The term loan at 10% a year, from its repayment schedule. Working capital: the limit at 10% a year.

7 **Tax**

Worked out for a partnership firm or LLP. The rule was verified at its source on 12-10-2026.

8 **Stock, debtors and creditors**

30, 30 and 30 days, of a full year's figures. The margin for working capital, part of the cost of the project, comes from these.

9 **The months before sales**

5 months from the loan to the first sales. The term loan is first drawn in November 2026. Interest in these months, ₹75,000, is paid by the partners and counted in the cost of the project.

10 **The levels**

DSCR is read against 1.50 on average and 1.25 in the lowest year. These are FinSight's default benchmarks; a lender may read against its own.

How the figures are worked out: sales are the capacity, its use and the price; profit before interest, depreciation and tax is sales less variable and fixed costs; interest on the term loan is from its repayment schedule. The full working is in the annex of the full report and in the Excel copy.

DECLARATION AND PAPERS ATTACHED

The partners stand behind the facts; the papers behind them are attached

DECLARATION

We declare that the information in this report is true to the best of our knowledge and belief, and that the projections are our honest estimate on the basis set out in the notes.
